Homework 2 Spec Req

Function: Store input into two arrays and then sum the two arrays into a third array for output.

Description:

Inputs: Two non-negative user input numbers.

Source: User Input.

Outputs: One array which is the sum of the two user inputs.

Destination: User command prompt display.

Action: Output is zero if user input exceeds one byte, else sum the two inputs and display that sum as the output.

Requirements: Two user inputted integer values.
